EBARA EVDP Vertical Turbine – New Product Launch!

We are excited to announce the release of a new pump product for promotion in the U.S. Market. EVDP Vertical Turbines are perfect for applications requiring up to 6,600 gallons per minute with up to 500 feet of Total Dynamic Head, all while achieving up to 93% efficiency providing the operator with 30% energy savings. This means real impact to your served market segments:

- Municipal Water
- Secondary Wastewater and post-processing
- Stormwater
- Industrial and Process
- Process Cooling Water
- Power Plants
- Mining
- Commercial Irrigation
- Geothermal
- Fish Farms
- And More!

EVDP Vertical Turbines are available in sizes from 8" to 20" pump diameters. Configurations can include anywhere between two to thirty-five stages as necessary to deliver better efficiency while still providing exceptional hydraulic performance. Outlet heads in 16" to 20" sizes are custom fabricated to desired pump drive varieties and matched mounting for NEMA Motors. Water, oil, and grease lubrication options are available, as well as specific materials that may be required for hard to match unique applications. EBARA has a full complement of Research & Development, and Testing facilities to provide custom designs and validate performance to ensure that an EVDP Vertical Turbine is the perfect choice for your pumping applications.

We invite you to preview introductory product information, including the EVDP Product Brochure, at <https://www.pumpsebara.com/product/evdp/>. Contact your EBARA Regional Sales Manager if you would like more information. You can also contact EPAC Customer Service at (803)327-5005 or by email: customer_service@pumpsebara.com

We look forward to hearing from you!
